

AVIV TANK MIX COMPATIBILITY

Extensive testing has demonstrated that AVIV fungicide is compatible with most commonly used pest control products at labeled use rates, including the fungicides and insecticides listed in the tables below.

Always read and follow all directions for use on the product labels. Summit Agro will support tank-mixes of AVIV with one of the fungicides or the insecticides from table below.

AVIV COMPATIBLE FUNGICIDES (ACTIVE INGREDIENTS)

Azoxystrobin	Fempropidin	Myclobutanil
Boscalid + Pyraclostrobin	Fempropimorph	Propiconazole
Chlorothalonil	Fenhexamid	Pseudomonas
Copper gluconate	Fluopicolide	Pyraclostrobin
Copper hydroxide	Fluopyram Tebuconazole	Pyraclostrobin + Boscalide
Copper salts of fatty acids	Fosetyl-AL	Pyrimethanil
Cymoxanil	Kresoxim-methyl	Sulfur
Cyprodinil	Mancozeb	Tebuconazole + Trifloxystrobin
Difenoconazole + Fludioxonil	Mepanipirim	Trichoderma harzianum strain T-22
Dimethomorph	Metrafenone	Tea Tree Oil

AVIV COMPATIBLE INSECTICIDES (ACTIVE INGREDIENTS)

Bacillus thuringiensis	Flonicamid	Pirimicarb
Beauveria bassiana	Imidacloprid	Spinosad
Chlorpyrifos	Lambda-cyhalothrin	Spirotetramat
Cinnamaldehyde	Methil chlorpyrifos	Thiamethoxam
Deltamethrin	Methomyl	

WARNING: The results presented herein are from laboratory experiments. Results may vary under different environmental conditions. Always read and follow label directions. Use plant protection products safely.

TANK MIXING RECOMMENDATIONS

MIXING INSTRUCTIONS: Dilute AVIV with water and apply with conventional spray equipment, sprinkler irrigation or other listed application methods. Partially fill the spray tank with clean water and begin agitation. Add the specified amount of AVIV to the tank. Finish filling the tank to the desired volume to obtain the proper spray concentration. Use spray mixture immediately. Do not allow spray mixture to stand overnight or for prolonged periods.

APPLICATION INSTRUCTIONS: Apply AVIV to the point of saturation of the soil or growing media. Good coverage and wetting is required. The amount of spray mixture to apply will vary depending on the type of crop. Most row crops will require up to 100 gallons of spray mixture per acre. Apply in sufficient water to achieve thorough coverage.

COMPATIBILITY: AVIV may be tank mixed with some fungicides. Use caution when tank mixing AVIV with more than one product. Consult specific product labels for additional information or restrictions concerning tank mixing. Observe the most restrictive of

the labeling limitations and precautions of all products used in mixtures.

It is always advisable to conduct a spray compatibility test when you plan to mix this product with another product. To determine the physical compatibility of this product with other products, use a jar test. Using a one quart jar, add the proportionate amounts of the products to approximately one quart of water with agitation. Add dry formulations first, then flowables, and then emulsifiable concentrates last. After thorough mixing, allow this mixture to stand for 5 minutes. If the combination remains mixed or can be readily remixed, it is physically compatible. Once compatibility has been proven, use the same procedure for adding products to the spray tank.

PHYTOTOXICITY: AVIV has been evaluated for phytotoxicity on a variety of crops under various normal growing conditions. However, testing all crop varieties in all mixtures and combinations is not feasible. Prior to treating entire crop, test a small portion of the crop for sensitivity.
